

PGY2 Ambulatory Care Pharmacy Residency Program

Purpose

Saint Joseph Regional Medical Center PGY 2 Pharmacy Residency Program is designed to produce exemplary ambulatory care pharmacists. This pharmacist will be independent, proficient and compassionate in all interactions with patients, learners, and colleagues, as well as a humble leader within the profession of pharmacy. Upon graduation from the program, this pharmacist will not only be competitive in the pursuit of faculty or non-faculty ambulatory care positions, but will also be successful in undertaking the building of a new position or practice site if desired.

Outcomes To Achieve This Purpose

Upon successful completion of this residency program, the pharmacist will be able:

To Teach

Successfully develop, coordinate, and conduct pharmacotherapeutic education for medical students, PharmD candidates, PGY-1 pharmacy residents, family medicine resident physicians and peers regarding the epidemiology, pathophysiology and evidence-based management of disease states commonly encountered in an ambulatory setting.

To Treat

Independently provide empathetic direct and collaborative patient care while being able to create the infrastructure or constructs necessary for successful practice development or sustainability in multiple settings.

To Lead

Effectively lead or actively participate in local, state, and national pharmacy or multidisciplinary committees that advance the practice of pharmacy in patient care, community involvement, pedagogy, and medication safety.
